Preliminary Programme

Introduction

The International Society of Pharmacovigilance (ISoP) and the Uppsala Monitoring Centre (UMC) have a common aim to explore the benefits and risks of medicinal products and to promote and enhance the safe and effective use of medicines. It is one of the primary objectives of ISoP and UMC to offer appropriate education and training in pharmacovigilance and to collaboratively intensify their activities in Latin America.

Aim

This three day-course is conducted with expertise from WHO-UMC and ISoP and is designed to address the practical and theoretical aspects of pharmacovigilance. Part of the training will address the safety monitoring of biotherapeutics and vaccines, and the problem of antibiotic resistance.

Target audience include regulatory agencies, hospitals, universities as well as industry professionals in all areas of pharmacovigilance and those staff members in related functions, such as clinical trials, technical product complaints, medical information, sales and marketing, regulatory affairs, legal affairs and audits.

At the end of the course, the participants are expected to understand the complexities of pharmacovigilance and to use various sources of information about risks and appropriate tools to advance better detection, monitoring, reporting and prevention to promote product safety.

Lectures, working groups and panel discussions between regulators and industry will be the main training method.
